Sequence 16, Application PC/TUS0335733
GENERAL INFORMATION:
APPLICANT: President and Fellows of Harvard College et al.
TITLE OF INVENTION: Compounds and Methods for the Treatment
TITLE OF INVENTION: and Prevention of Bacterial Infection
FILE PERBRECE: 00742/072003
CURRENT APPLICATION NUMBER: PCT/US03/35733
CURRENT RILING DATE: 2003-10-10
PRIOR FILING DATE: 2002-11-08
NUMBER OF SEQ ID NOS: 38
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 16
LENGHH: 711
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 711;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SwissProt_42:* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PTM: Merozoite surface antigen contain the sequence of 83 kDa, 4 kDa and 19 kDa antigens which are the major surface antigens of merozoites. The maturation take place during schizont.
                                                                                                                                                                                                                                                                                    GPI-anchor

"Identification of a novel, putative Rho-specific GDP/GTP exchange
factor and a RhoA-binding protein: control of neuronal morphology.";
J. Cell Biol. 137:1603-1613(1997).
-!- FUNCTION: Rhoa-binding protein involved in control of the actin
cytoskeleton. Overexpression promotes neuronal cell flattening and
neurite outgrowth, probably by counteracting rhoa-mediated
signaling.
-!- TISSUE SPECIFICITY: Highly enriched in the brain.
-!- SIMILARITY: Contains 2 PH domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         287 LLSPPSPSTPHSRRSQVIEKFEALDIEKAEHMETNMLILTTPSSDTRQGRSERRAIPRKR

"The molecular biology of the SIR proteins.";
Gene 279:1-16 (2001).
-!- FUNCTION: The proteins SIR1 through SIR4 are required for transcriptional repression of the silent mating type loci, M.W. The proteins SIR2 through SIR4 repress multiple loci by modulating chromatin structure. Involves the compaction of chromatin fiber into a more condensed form.
-!- SUBUNIT: Homodimer and interacts with SIR1, SIR2, SIR3 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GG, 80002635; SIR4.
